

Retrofitting **STRIPS**

Before removing old fluorescent or LED lamps,
shut off power to the light.

* Retrofitting should be done by a qualified installer who will follow all relevant building and electrical codes.

Retrofitting **STRIPS**

Remove ballast cover.

Disconnect power wires and carefully remove old ballast and sockets.

Housing is ready for the installation of the
BLU DRiVe™ BD35.

Choose between 750mA (35W), 600mA (28W), or 450mA (21W). After splicing building power through the disconnect provided, plug in the 24 inch white BB cable to port BB-1 on the BD35 BLU DRiVeTM.

Overview of BLU DRiVe™ features.

Plug 24 inch BLU BaRs™ cable into the BLU DRiVe™ BB (1) port and push opposite end through socket opening for connection to BLU BaR™. Leave 3 inches of Antenna outside of metal housing. Replace cover when complete.

24" cable plug

Plug 15 inch cable into one end of first BLU Bar™ . Plug 24 cable into opposite end and then place BLU BaR™ on the housing.
Plug the open end of the 15 inch cable into the second BLU Bar™ and then place on housing.

Tuck excess connector cable into the housing and leave 3 inches of antenna out

Use a portable drill with Philips head to drill one tek screw (provided with BLU BaRs™) into both sides of each BLU BaR™. You are now ready to energize! The BLU BaRs™ will express the default color and power settings.

Retrofitting **STRIPS**

After energizing you may connect and program using the SMART BLU™ App. See **www.smartblu.com** for more information.
